Global COVID-19 Clinical data platform for clinical characterization and management of hospitalized patients with suspected or confirmed COVID-19

World Health Organization

The understanding of COVID-19's clinical features in different regions of the world and its subpopulations is as yet quite limited. Determining optimal clinical management strategies — especially with respect to vulnerable groups, including populations with co-morbidities, pregnant women and children — poses unique challenges to healthcare providers worldwide.

WHO's Global COVID-19 Clinical Data Platform is an initiative designed to respond to this problem. It has been created with the objective of informing development of clinical management guidelines, as well as supporting operational planning for public health response- through rapid and systematic collection and pooling of clinical data from diverse settings. The WHO Platform uses standardized case report forms, is secure and will offer the global scientific and clinical community the access to pooled data from diverse settings as well as the opportunity to collaborate for research and publication.

How to contribute your data

➤ Step 1: Register as a contributor Here

➤ Step 2: Review and accept the terms and conditions

The WHO team will verify your information and revert to you with login credentials and/ or further details.
